Chapter 4

Website Optimization

Chapter 4 Topics

URLs and Site Architecture

Page Architecture

SEO Web Design

Geographic Targeting

SEO Strategy

A detailed description of a site's needs and plans that map specific goals for SERP results and site conversion over a long period of time, along with the tasks and tools needed to achieve those goals.

Strong SEO strategies are:

- Informative
- Comprehensive
- Detailed
- Measurable
- Scheduled
- Current

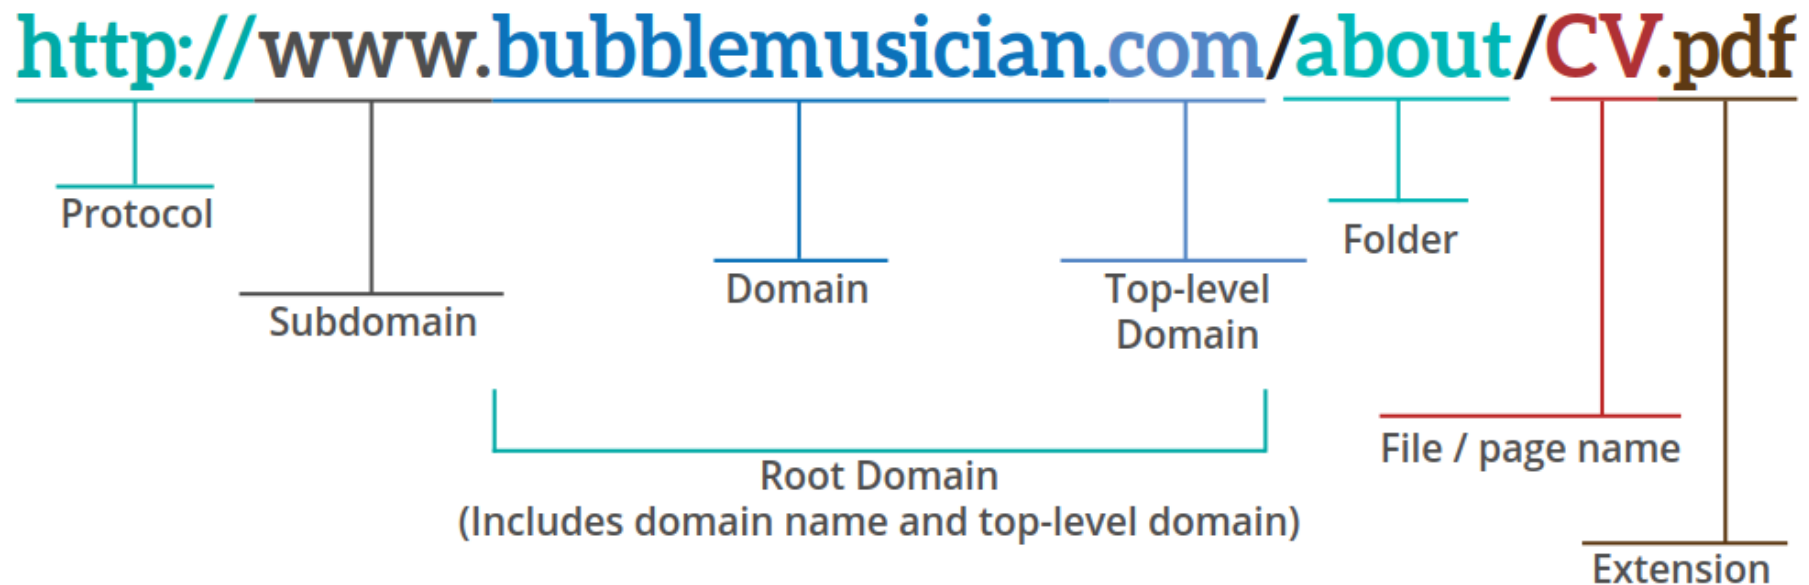

Activity: Strong SEO Strategies

- Look at one or two of the characteristics of strong SEO strategies and think about what the characteristic(s) might look like in real-world practice.
- Brainstorm a few details about SEO strategies that are informative, comprehensive, detailed, measurable, scheduled, or current.
- Be prepared to share your ideas with the class.

URLs and Site Architecture

URLs and Site Architecture

- Every website has a Uniform Resources Locator (URL), or web address, its unique reference point in a network. That URL can be broken down into smaller parts.

Good URLs and Site Architecture

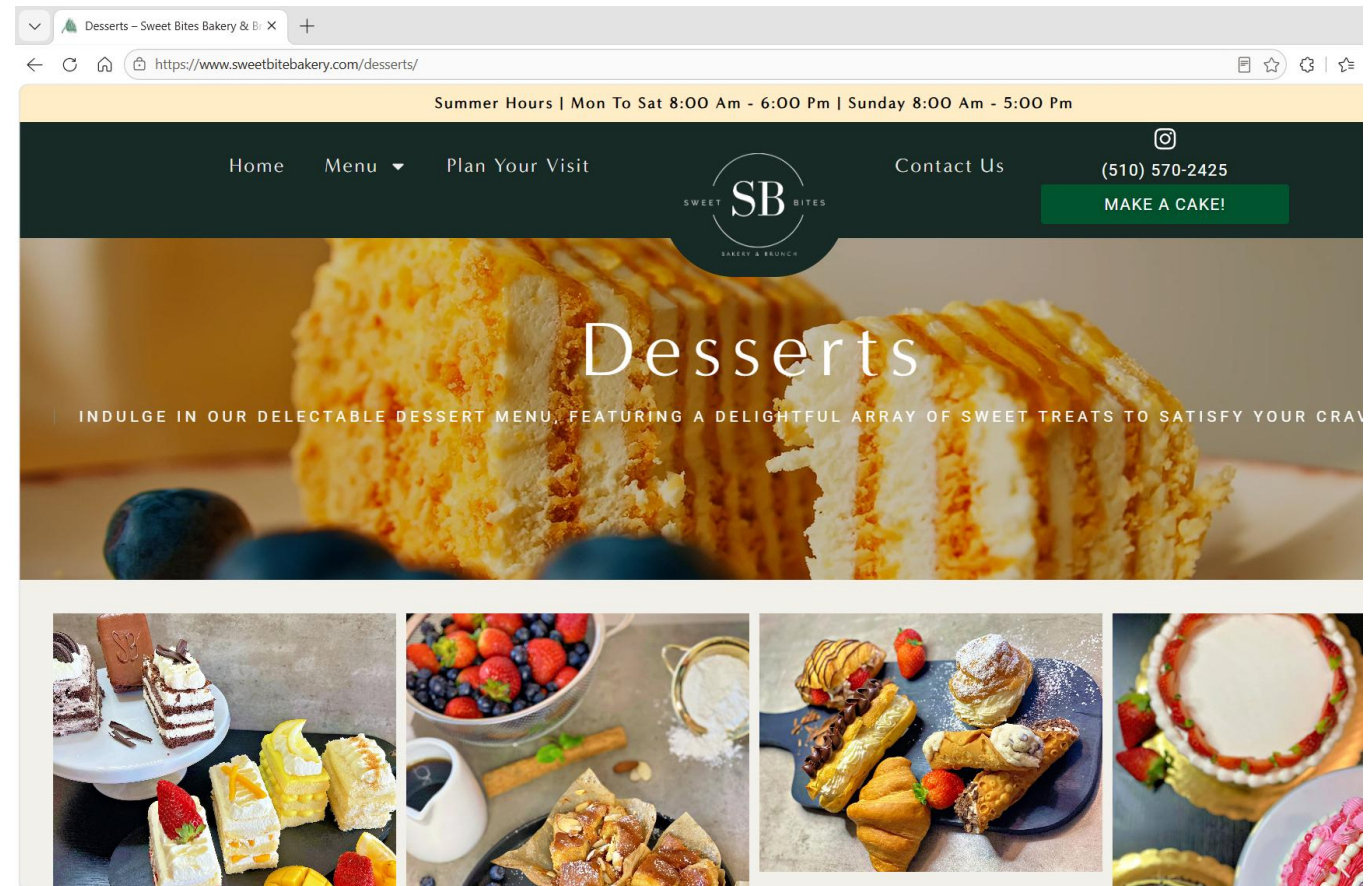

- **SEO Benefits:**
- Descriptive URLs make it clear to both users and search engines what each page is about.
- Grouping products by type (e.g., under "Breads") simplifies navigation and reinforces keyword relevance.

Site Architecture:

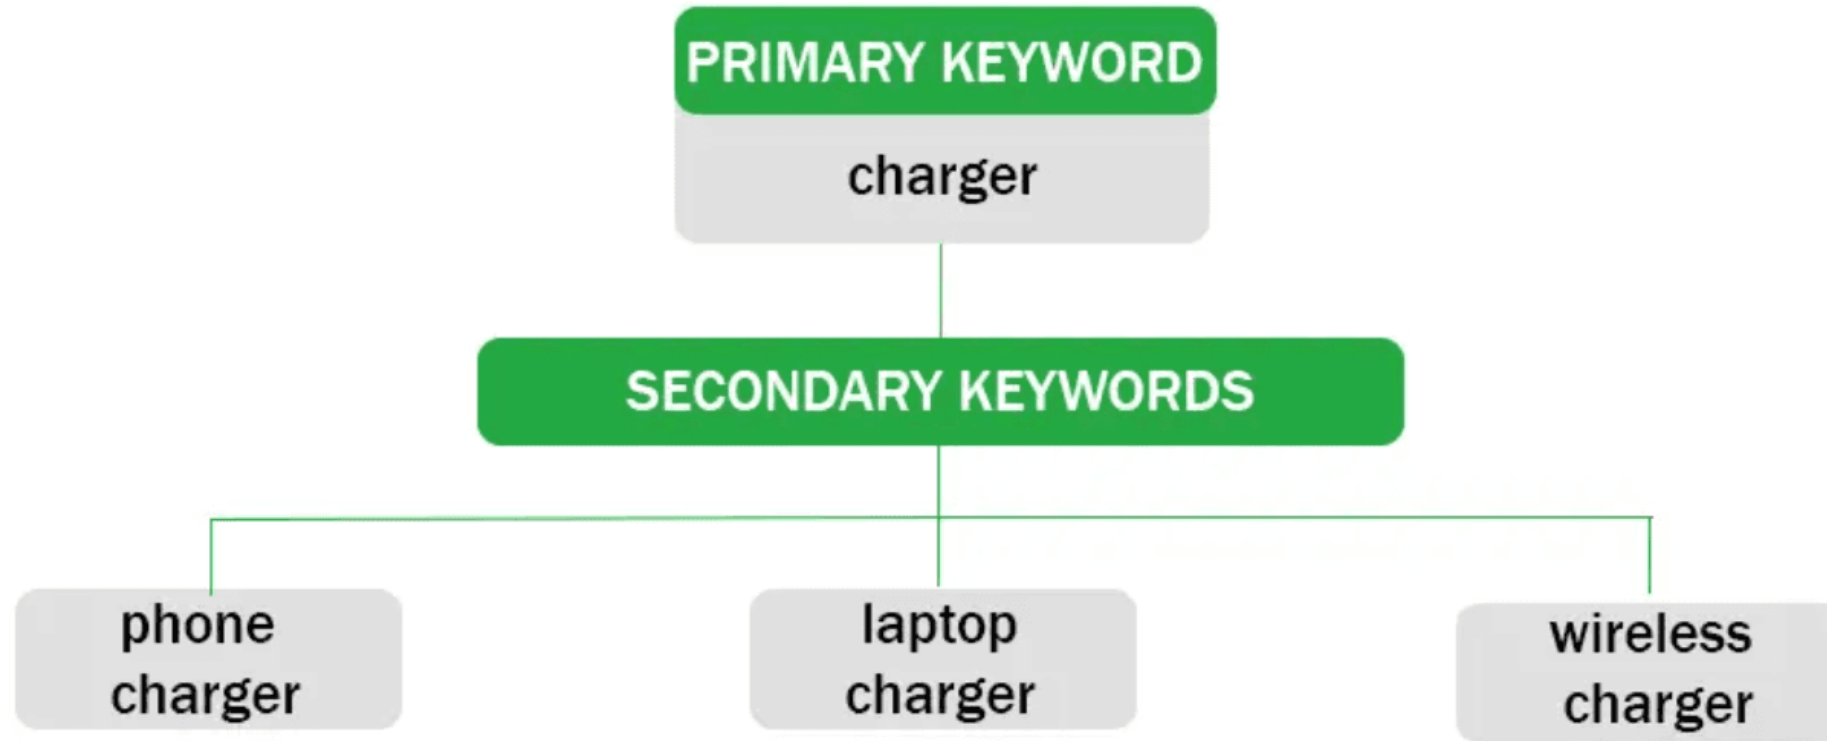

- Home
 - | — Breads
 - | | — Artisanal Bread
 - | | — Sourdough Bread
 - | | — Multigrain Bread
 - | | — Gluten-Free Bread
 - | — About Us
 - | — Blog
 - | — Contact Us

Good URLs and Site Architecture

- **Local Bakery Website (Sweet Bites Bakery)**
- **Primary Keywords:**
artisanal bread,
sourdough bread,
multigrain bread, gluten-free bread:

Good URLs and Site Architecture with specific Keywords:

Good URLs and Site Architecture

- **SEO Benefits:**
- URL structure aligns with **class types**, improving relevancy and making it easy for users to find specific classes.
- A blog allows for **targeting long-tail keywords**, addressing topics that potential clients might search for.

Site Architecture:

- Home
 - ├── Classes
 - | ├── Beginner Yoga
 - | ├── Gentle Yoga
 - | ├── Yoga for Flexibility
 - | └── Stress Relief Yoga
 - ├── About Us
 - ├── Blog
 - ├── Testimonials
 - └── Contact Us

Good URLs and Site Architecture

- Yoga Studio Website
(Harmony Yoga Studio)

- **Primary Keywords:**
beginner yoga classes,
gentle yoga classes for
beginners, yoga for
beginners flexibility, stress
relief yoga

URL Structure Example:

- Homepage: `www.harmonyyogastudio.com`
- Class Category Pages:
 - `www.harmonyyogastudio.com/classes/beginner-yoga`
 - `www.harmonyyogastudio.com/classes/gentle-yoga`
 - `www.harmonyyogastudio.com/classes/yoga-for-flexibility`
 - `www.harmonyyogastudio.com/classes/stress-relief-yoga`
- Blog:
 - `www.harmonyyogastudio.com/blog`
 - `www.harmonyyogastudio.com/blog/how-yoga-helps-stress-relief`

Writing Blogs with Question Based Keywords Based on Different Customer Journey

- **1. Awareness Stage**

- **Objective:** Educate potential customers and raise awareness about yoga benefits.

1. "What Are the Benefits of Practicing Yoga for Beginners?"

1. Focus keyword: "Benefits of practicing yoga"
2. Educates new visitors about how yoga can improve physical and mental well-being.

2. "How Do I Choose the Right Type of Yoga for My Goals?"

1. Focus keyword: "Choose the right type of yoga"
2. Helps prospects understand the variety of yoga styles and what fits their lifestyle.

3. "Why Is Yoga a Good Way to Start Your Fitness Journey?"

1. Focus keyword: "Why is yoga a good start"
2. Answers the curiosity of beginners looking for a gentle entry into fitness.

Writing Blogs with Question Based Keywords Based on Different Customer Journey

- **2. Consideration Stage**

- **Objective:** Help prospects compare options and make decisions.

1. "Which Yoga Classes Are Best for Stress Relief?"

1. Focus keyword: "Yoga classes for stress relief"
2. Provides detailed insights on classes like restorative yoga for stress management.

2. "What Should I Look for in a Yoga Studio Near Me?"

1. Focus keyword: "Yoga studio near me"
2. Answers key questions about finding the right yoga studio, focusing on amenities and atmosphere.

3. "How Much Does It Cost to Join a Yoga Studio?"

1. Focus keyword: "How much does yoga cost"
2. Discusses pricing plans and packages to address budget concerns.

Writing Blogs with Question Based Keywords Based on Different Customer Journey

- **3. Decision Stage**
- **Objective:** Drive conversions by providing reassurance and addressing final doubts.
- 1. **"What Should I Bring to My First Yoga Class?"**
 1. Focus keyword: "What to bring to yoga class"
 2. Answers practical questions to ease beginner concerns and encourage sign-ups.
- 2. **"How Can I Book My First Yoga Class Online?"**
 1. Focus keyword: "Book yoga class online"
 2. Walks users through the booking process, making it seamless and encouraging immediate action.
- 3. **"What Do Students Say About [Your Studio's Name] Yoga Classes?"**
 1. Focus keyword: "Yoga class reviews"
 2. Highlights testimonials and positive experiences to build trust.

Writing Blogs with Question Based Keywords Based on Different Customer Journey

- **4. Post-Purchase Stage**

- **Objective:** Build engagement and retain customers.

- 1. "How Can I Improve My Flexibility with Yoga at Home?"**

1. Focus keyword: "Improve flexibility with yoga"
2. Encourages students to practice outside of class while staying connected with the studio.

- 2. "What Are the Best Yoga Poses for Relaxation After Work?"**

1. Focus keyword: "Yoga poses for relaxation"
2. Adds value for members by providing tips and showing the studio's care beyond sessions.

- 3. "Why Should You Try Our Advanced Yoga Workshops?"**

1. Focus keyword: "Advanced yoga workshops"
2. Promotes additional offerings to keep members engaged and enrolled.

Writing Blogs with Question Based Keywords Based on Different Customer Journey

- **5. Referral Stage**

- **Objective:** Encourage advocacy and attract new members through loyal customers.

- 1. **"How Can You Refer Friends and Earn Rewards at [Your Studio's Name]?"**

1. Focus keyword: "Refer friends to yoga studio"
2. Promotes referral programs and loyalty incentives.

- 2. **"What Are the Top 3 Reasons to Try Yoga with Friends?"**

1. Focus keyword: "Try yoga with friends"
2. Encourages members to bring their social circle to the studio.

- 3. **"Why Do Our Members Love Practicing Yoga Together?"**

1. Focus keyword: "Why practice yoga together"
2. Highlights the community aspect of yoga at your studio.

Blog Site Structure with Journey Keywords:

- Awareness Stage:**

- Blog Post: /blog/benefits-of-practicing-yoga
- Blog Post: /blog/how-to-choose-the-right-type-of-yoga
- Blog Post: /blog/why-yoga-is-a-good-start

- Consideration Stage:**

- Blog Post: /blog/best-yoga-classes-for-stress-relief
- Blog Post: /blog/what-to-look-for-in-a-yoga-studio
- Blog Post: /blog/how-much-does-yoga-cost

- Decision Stage:**

- Blog Post: /blog/what-to-bring-to-your-first-yoga-class
- Blog Post: /blog/how-to-book-your-first-yoga-class
- Blog Post: /blog/yoga-class-reviews

- Post-Purchase Stage:**

- Blog Post: /blog/improve-flexibility-with-yoga-at-home
- Blog Post: /blog/yoga-poses-for-relaxation-after-work
- Blog Post: /blog/try-advanced-yoga-workshops

- Referral Stage:**

- Blog Post: /blog/refer-friends-to-yoga-studio
- Blog Post: /blog/try-yoga-with-friends
- Blog Post: /blog/why-practice-yoga-together

URLs and Site Architecture Best Practices

- **Short, Descriptive URLs:** URLs are concise, include target keywords, and clearly describe the page content.
- **Logical Hierarchy:** Each site's structure follows a simple, visualize hierarchy, which enhances navigation and internal linking.
- **Keyword Relevance:** Using specific keywords in URLs aligns the site with SEO goals, making it easier for search engines to index and rank content based on relevant searches.
- **Content Organization:** Organized into categories that reflect user intent, helping users find what they need quickly and improving overall SEO performance.

Domain Squatting (Not recommended)

- Choosing a domain is often complicated by the fact that a domain name is already in use or is owned by someone else.
- **Domain squatting** - the practice of holding domain names to profit from someone else's trademark
- It is prohibited in some countries, but there are no laws stopping people from buying good, unbranded domains and not using them.

Choosing a Domain

- To expand web presence, own domains across multiple **top-level domains** (TLDs).
- The most common TLD is **.com**, but there are a wide range of TLDs that businesses can consider.
- What do you know about the following TLDs: .ca, .org, .edu, .gov?
- Can you list other ones?

URLs and Site Architecture

Valuable Domain Forwarding

- Owning your brand name across multiple TLDs
- Owning common misspellings or mistyped versions of a domain
- Owning variations of a business or product names

Irresponsible Domain Forwarding

- Directing unrelated URLs to a site
- Keyword stuffing URLs
- Redirecting URLs through multiple sites before landing on the final site

Secure Protocols

- Initially, all webpages used HTTP protocol to send data between browsers and websites.
- For many years HTTPS was limited to pages that processed payments or personal information.
- With an ever-increasing need for internet security, HTTPS protocol, with its encrypted communication, is becoming more popular and valuable.
- Google updated its algorithm to reward sites that use HTTPS.

Paths

- SEO pros may work at structuring sites so that folder and page names produce clear, simple, and informative URLs.
- Look at the URLs below. Which one gives a clearer sense of where you will be directed after clicking on it?

<https://www.reliableparts.ca/catalog/475352>

<https://www.thebbqdepot.com/grill-parts/burners/>

Paths

- When structuring pages and folders on website, keyword-rich names can improve rank.
- These names may be associated with important brand and industry keywords.
 - Product and Service Categories
 - Brand
 - Skills
 - Industry Class or Sector

URLs and Site Architecture

- To make URLs easy for readers and web crawler bots, they should have the following:
 - Closely matched page titles
 - **No stop words**
 - **Hyphens**, not spaces, underscores, or lack of space
 - 100 characters or less
 - **Create Folders**, rather than subdomains

Examples of Stop Words

- **Articles:** a, an, the
- **Conjunctions:** and, but, or
- **Prepositions:** in, on, at, with
- **Pronouns:** it, he, she, we, they
- **Other Common Words:** is, of, to, for, by, about

Website Layout

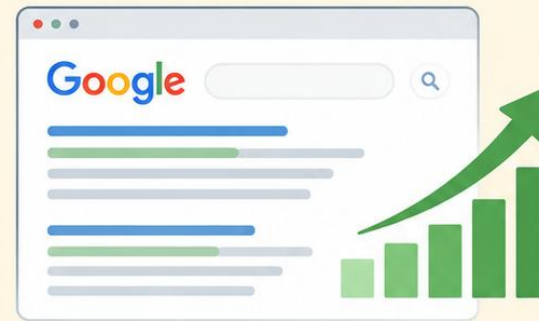

- Another important factor in search engine ranking.
- Sites with a **simple and clear layout are easier to navigate**, so internet users and web crawler bots prefer them.
- Ensure that pages are laid out along intuitive (Visualized) and simple paths.
- Homepages should **have generic information**, and navigation from them should lead down progressively more specific paths.

Website Layout

A well-designed layout improves user experience and helps with search engine ranking.

1 Supports Search Engine Ranking

A well-structured website layout is another important factor in search engine ranking.

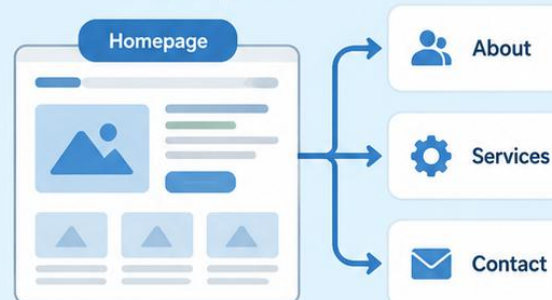

2 Simple and Clear Layout is Easier to Navigate

Sites with a simple and clear layout are easier to navigate, so internet users and web crawler bots prefer them.

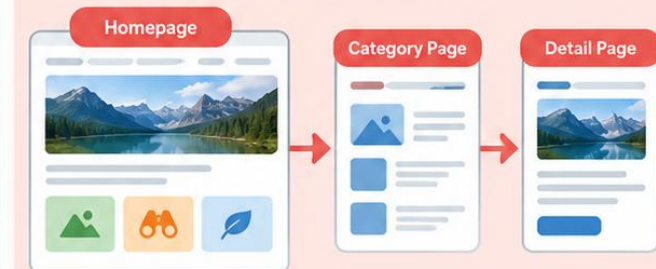

3 Intuitive and Visual Design

Ensure that pages are laid out along intuitive (visualized) and simple paths.

4 Clear Homepage Direction

Homepages should have generic information, and navigation from them should lead down progressively more specific paths.

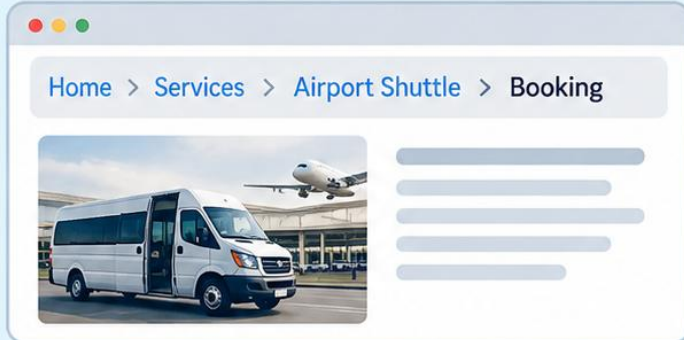

Website Structure Elements

1

Breadcrumbs

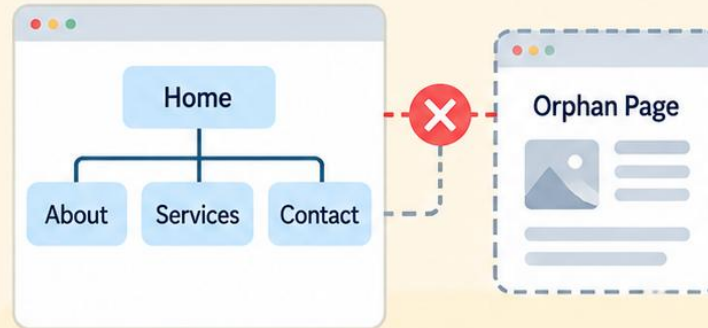

Help users move between specific and general pages.

2

Orphan Pages

Exist but have no navigation to them.

3

Link System

Create links so users and crawlers can navigate to pages.

4

SEO Path for Orphan Pages

Give orphan pages a path so search engines can find them.

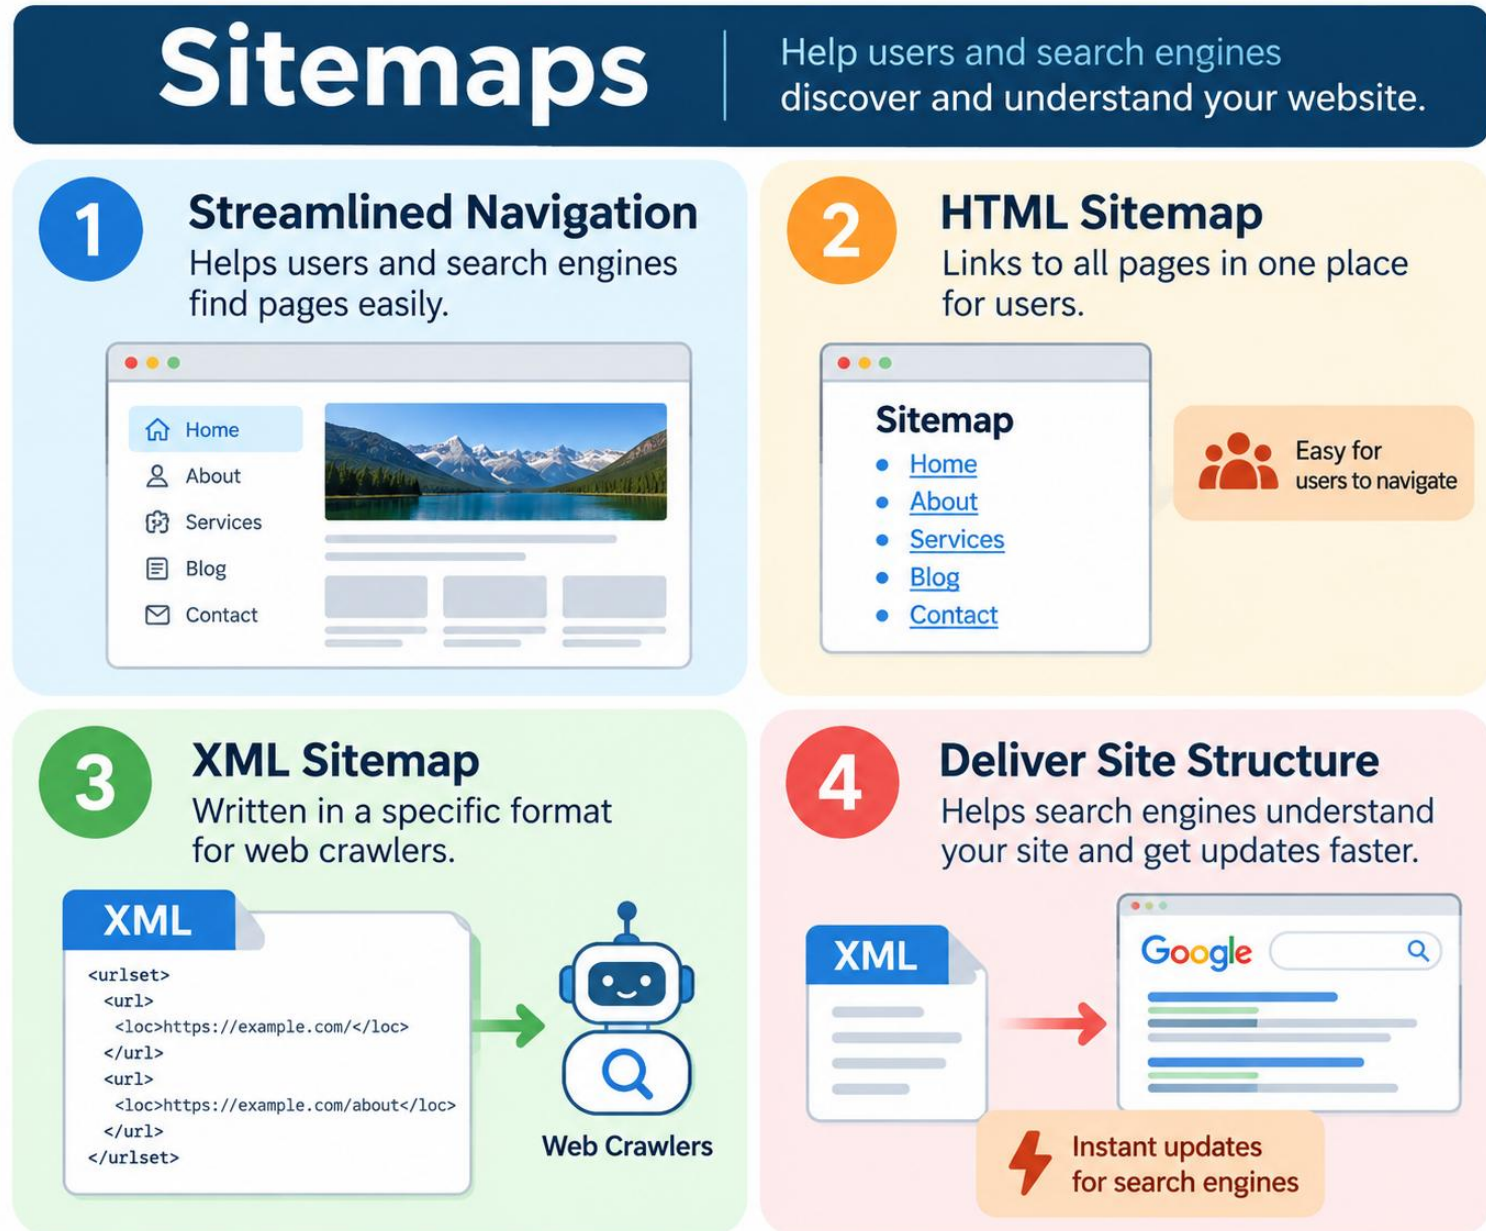

Wix: Choose Developer Mode > Choose "+" > Add Menu > Breadcrumbs

WordPress: Add Plug-in > [Breadcrumb NavXt](#).

Sitemaps

- Once page navigation is streamlined, provide users and search engines with sitemaps.
- HTML sitemaps provide links to all your pages in one place.
- XML sitemaps are written in specific format designed for web crawlers.
- XML sitemap files deliver to search engines the site architecture information, allowing instant updates rather than waiting for web crawler bots to crawl the website again.

Always know about your sitemap:

404 Page

- Occasionally, navigation fails and users follow a link to a page that does not exist or no longer exists on a website.
- The user is brought to a 404 page, which often displays a generic message that the desired page cannot be found.
- 404 pages can easily be optimized with links back to the homepage, and popular or related site content.
- Ideally, broken links should be redirected to appropriate pages, but a 404 page will assist with navigation until broken links are found.

404 Page

Helps users when a page cannot be found and keeps them on your website.

1

A link leads to a missing page

Users may click a link that no longer exists or was typed incorrectly.

2

User sees a 404 page

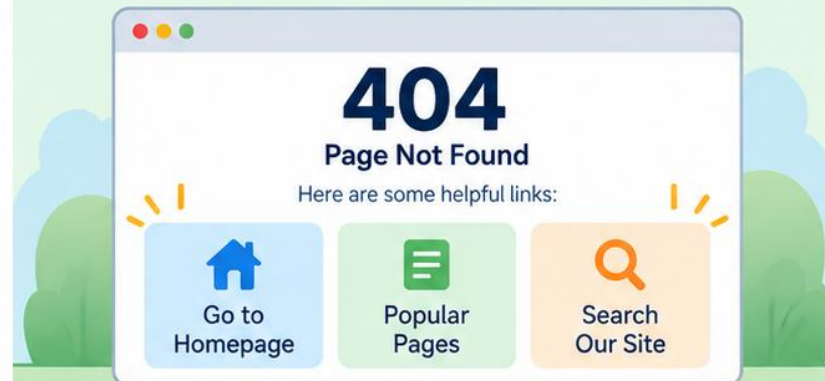

A message shows that the page cannot be found.

3

Include helpful navigation

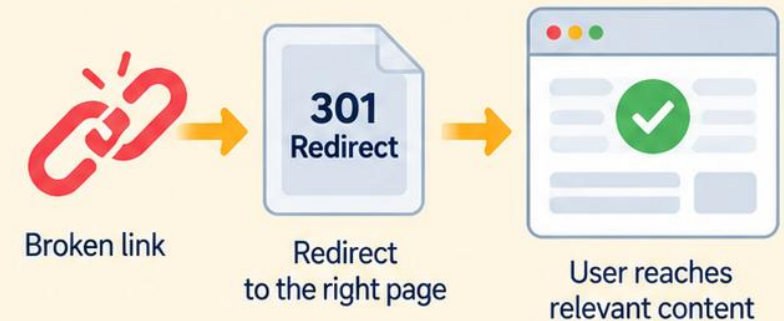

Add links to the homepage and popular or related content.

4

Redirect broken links when possible

Ideally, fix broken links with redirects. The 404 page helps users until the links are updated.

Class Activity: URL Hunt

Using a web browser, browse the web and find examples of the following website elements:

- 404 page
- Breadcrumbs
- URL that is much longer than the recommended length
- Site with poor architecture
- Site with strong and clear architecture
- URL that is vague and unclear of the page content

Learning Zone – Site Architecture

Review the URLs for your site.
Do they need to be optimized?

Set up a 404 page.

Create an XML Sitemap.

Your instructor will submit one
to Google and any other
relevant search engines.

Page Architecture

Page Titles

- **Page Titles (title tag):** give the reader a clear idea of what the page is about. Should be clear and very concise, because they are displayed in various off-page places.
- Typically, are about 70 characters containing a basic content descriptor and brand name.
- On a website, title is often displayed:
 - In a tab
 - At the top of a window
- Page titles sometimes mirror the URL, but don't have to.
- On the SERP, the page title is often displayed in blue, below the URL.

Page Titles (Title Tag)

A clear and concise title helps users understand the page and appears in multiple places.

1 Clear and Concise

Tell users what the page is about.

- Clear meaning
- Concise (about 70 characters)
- Include brand name

2 About 70 Characters

Typically around 70 characters, including a brief description and brand name.

Example (≈ 70 characters)

Fresh Flower Delivery in Kelowna | Okanagan Florist

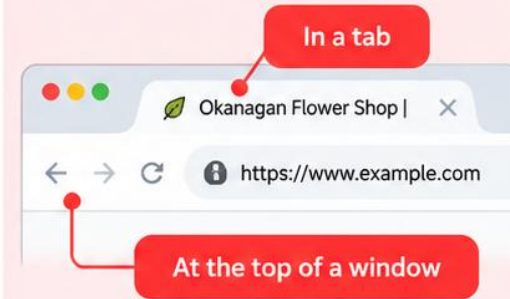

~ 70 characters

3 Displayed in the Browser

The title appears:

- In a tab
- At the top of a window

4 May Mirror the URL

The page title sometimes matches the URL, but it doesn't have to.

https://www.example.com/flower-delivery

Flower Delivery | Okanagan Florist

Same (optional)

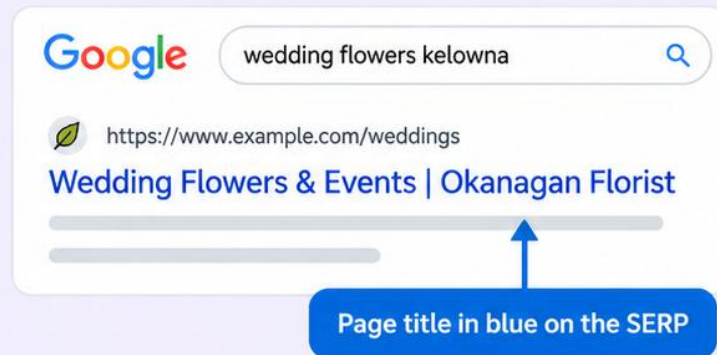

https://www.example.com/weddings

Wedding Flowers & Events | Okanagan Florist

Different (also OK)

5 Shown in Search Results

On the SERP, the page title is displayed in blue, below the URL.

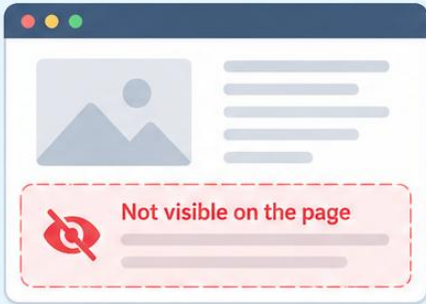

Meta-Descriptions

A short summary that appears in search results and helps users understand your page.

1 Short summary (not on the page)

Brief paragraph that doesn't display on your webpage.

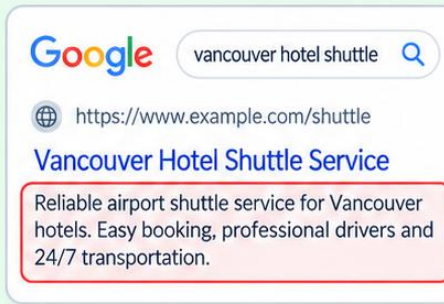

2 Created for search engines

Added behind the scenes and crawled by search engines to help them index your page.

3 Shown in search results

Appears on SERPs, just below the page title and URL.

4 Helps users decide

Gives a brief description of your brand and page content.

5 Include important keywords

Use relevant keywords and keep it concise (about 150 – 160 characters).

- ✓ Include main keywords
- ✓ Keep it short and clear
- ✓ Highlight key benefits or information
- ✓ Aim for 150 – 160 characters

- Short paragraphs that don't display on webpages themselves.
- Created behind the scenes but crawled for info to help index pages.
- Often displayed on SERPs, just under the page title and URL.
- Allow users to read a brief description of the brand and page contents.
- Should include keywords to convey the most important and accurate info within the first 150 – 160 characters.

Class Activity: Add Page Titles and Meta-Descriptions for Your Personal Portfolio

Create a page title and meta-description for each webpage described below:

SEB Testing

Final Exam: Chapters 9,10,11,17

This assessment is worth 20% of your course grade.

Download the Safe Exam Browser onto your device. Do this a few days before the exam so that we can correct any issues before exam day.

Attempts allowed: 1

Quiz has been configured so that students may only attempt it using the Safe Exam Browser.

Time limit: 3 hours

The config key or browser exam keys could not be validated. Please ensure you are using the Safe Exam Browser with correct configuration file.

Download Safe Exam Browser

Launch Safe Exam Browser

Headings

- A heading displays directly on a webpage.
- Headings and subheadings:
 - Show what each section is about
 - Allow readers (and web crawler bots) to quickly scan a page
- Often, a webpage's page title is different from the main heading at the top of a page (H1)
- H1 = most important page heading; only one per page; includes primary keywords
- H2 – H6: additional headings to organize info, descending degree of importance

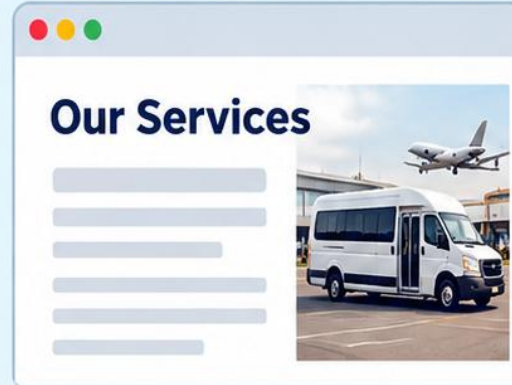

Headings (H1–H6)

Help organize content and make it easy to understand for users and search engines.

1

Display on the page

Headings appear directly on your webpage.

2

Show section topics

Headings and subheadings show what each section is about.

H1 Airport Shuttle Service
H2 Hotel Pick-up & Drop-off
H2 Our Fleet
H3 24/7 Service
H3 Group Transportation

3

Help readers scan

Make it easy for users and web crawlers to quickly understand the page.

4

Page title vs. main heading (H1)

The page title (in the browser/SEO) is often different from the H1 on the page.

5

Use correct heading structure

H1 is the most important; only one per page. H2 – H6 organize content by importance.

H1

- Most important heading
- One per page
- Include primary keywords

H2

- Section headings
- Organize main topics

H3 – H6

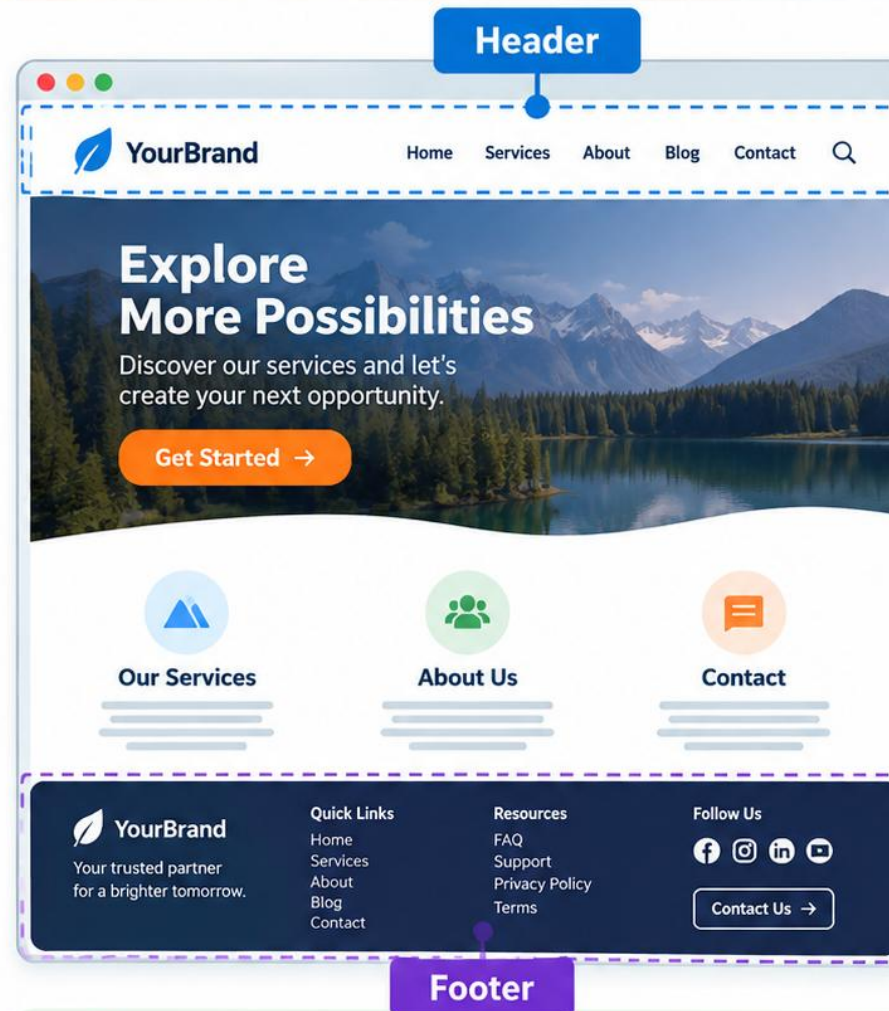

- Subsections
- Use in descending importance

Headers and Footers

- Traditionally, sites have a header, a main body, and a footer.
- Headers and footers have evolved – mobile devices, less space.
- Footers: bottom of the page.
- Have CTA buttons and navigation options in the footer.
- Will help visitors find the next page on the site and can create conversions.

Headers and Footers

Help users navigate your site and take the next step.

1

Header at the top

Usually includes the logo and main navigation.

YourBrand

Home Services About Contact

2

Adapted for all devices

Headers and footers have evolved for mobile devices with less space.

YourBrand

Home Services About Contact

3

Footer at the bottom

Often includes CTA buttons and navigation options.

YourBrand

Your trusted partner
for a brighter tomorrow.

4

Help users and drive conversions

Easy navigation

Helps visitors find the next page.

CTA buttons

Encourage users to take action.

Increase conversions

Guide visitors to important pages and actions.

Class Activity: School Website Audit

- Look at your school's website and discuss the use of headings on pages.
- Examine headers and footers on desktop and mobile versions of the site.
- Discuss how effective they are at helping users navigate the site and convert.

Build It Zone: Class Site Page Architecture

- Improve the page architecture of the class site for SEO.
- Each page will need attention to the title, meta-description, and heading structure.
- The site will need a quality and useful header and footer.
- Test your changes on multiple devices, making the pages display well.

SEO Web Design

Search Engine Optimized Websites

- **Discussion Questions:**

- Describe your understanding of search engine crawler bots and how they work.
- Should search engine bots be able to crawl and index every page on the Internet? Why or why not?
- Do search engine bots 'see' and understand the same info on pages that human users do? Why or why not?
- Is it valuable for SEO pros to employ web design that specifically serves search engine bots? Why or why not?

Search Engine Optimized Websites

- The main goal of SEO is to make websites user-friendly—giving optimal experiences to visitors looking for information.
- However, there are several concepts to keep in mind when designing search engine optimized websites, that specifically benefit search engines, their web crawler bots, and their indexing processes:

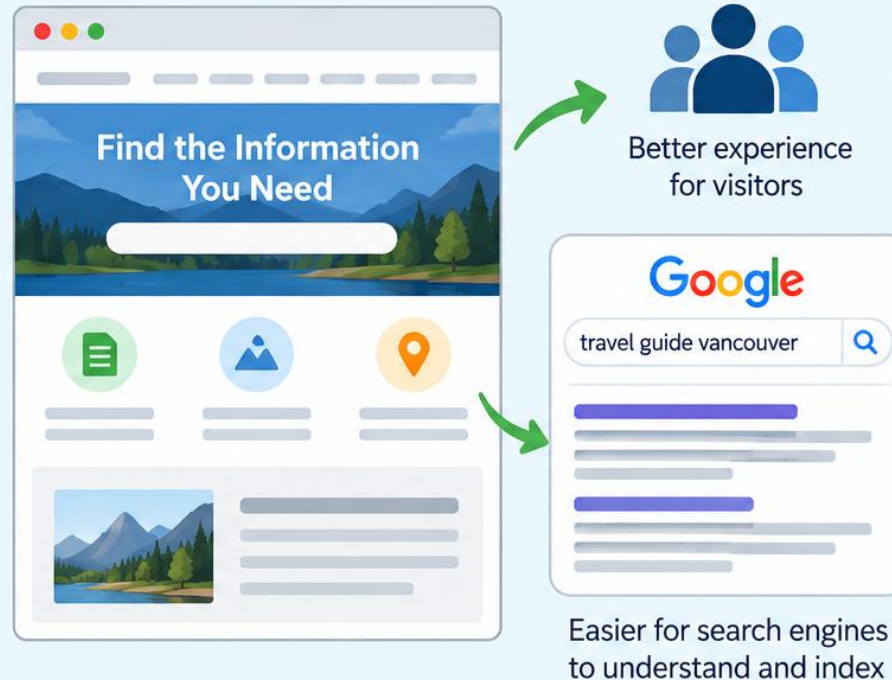

Search Engine Optimized Websites

Design websites for both visitors and search engines.

1

The Goal of SEO

Create user-friendly websites that give visitors the best experience when looking for information.

2

Key Concepts for SEO-Friendly Websites

Consider these important factors when designing your website to support search engines, web crawler bots, and indexing.

User-Friendly Experience

Easy to navigate and find information.

Search Engine Friendly

Help search engines and crawlers understand your content.

Well-Structured Content

Use clear headings, relevant keywords and organized pages.

Technical Considerations

Ensure clean URLs, fast loading, and mobile friendly design.

Support Indexing

Make it easy for search engines to crawl and index your site.

Build It Zone – Text Cache Analysis (Internet Archive)

- Look at the text cache for one or more pages on the class site.
- Analyze the text that search engines use to crawl and index the page(s) and decide how valuable it is for indexing.
- Make a list of any changes you think are necessary to improve the text on the page(s).
- As a class, decide which changes you want to make and implement them.

Robots.txt

- If a website stores personal information of website users or customers, the names and home addresses of those users should not show up on the SERP.
- Robots.txt file is a text file on a website that instructs search engine to ignore certain parts of the site.
- Created to prevent search engine from crawling pages like the admin, logins, cart pages, etc.

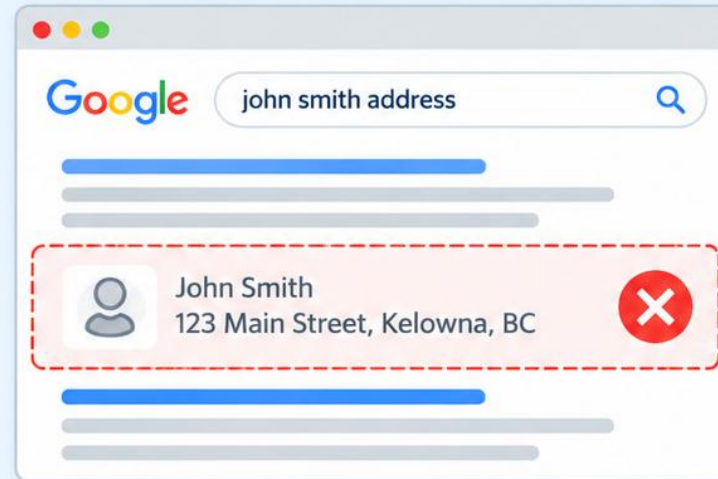

Robots.txt

A text file that tells search engines which parts of your site to ignore.

1

Keep personal information out of search results

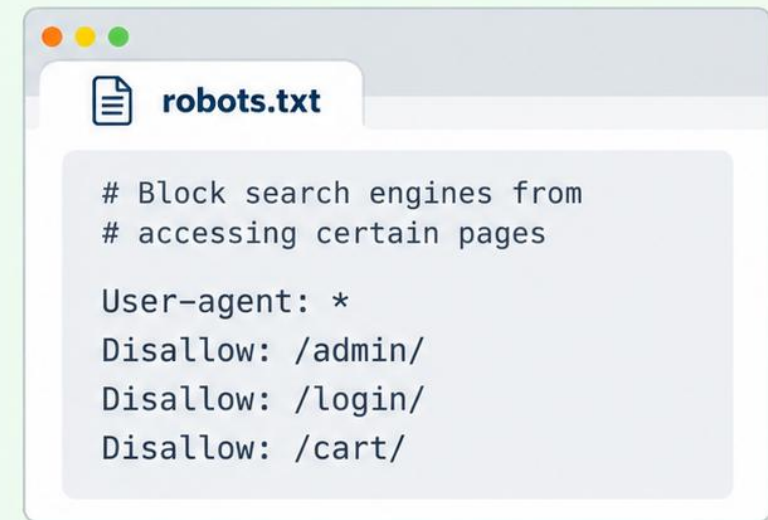

Names, addresses and other customer information should not appear on the SERP.

2

What is robots.txt?

A text file on your website that instructs search engines to ignore certain parts of the site.

3

Used to block specific pages

Helps prevent search engines from crawling pages such as admin areas, logins, cart pages, etc.

Admin pages

Login pages

Cart pages

Other private areas

Robots.txt

- SEO pros create robot.txt files to tell crawler bots where and where not to crawl.
- This file doesn't block bots from crawling an entire site, only areas specified using 'allow', 'disallow', and 'crawl-delay'.
- Since different search engines have different crawlers, robot.txt files are customizable.
- When the user-agent is specified with *, all bots must follow the allow and disallow commands. If only one user agent is specified, the commands apply to crawlers from that search engine.

```
User-agent: *  
Allow: /  
  
# Allow AI crawlers and answer engines  
User-agent: GPTBot  
Allow: /  
  
User-agent: ClaudeBot  
Allow: /  
  
User-agent: PerplexityBot  
Allow: /  
  
User-agent: Google-Extended  
Allow: /  
  
Sitemap: https://ayaflorists.com/sitemap.xml  
  
# LLM/AEO manifest  
# https://ayaflorists.com/llms.txt
```

LLM/AEO manifest (most commonly implemented as an **llms.txt** file) is a standardized text file placed in a website's root directory to declare and map out website data specifically for AI crawlers. It serves as a machine-readable directory that guides **Large Language Models (LLMs)** and **Answer Engine Optimization (AEO)** search agents to a website's most relevant, structured, and citable information. [\[1\]](#)

No Follow Attributes

- Links can be a valuable way to move up to and maintain top SERP ranking.
- However, sometimes site users add links that are not helpful.
- For example, sites with guestbooks, or blogs with comment sections, can find spammy entries that direct people away from the site. Using **rel='no follow' attributes** tells web crawler bots not to follow the link and that you don't want it reflecting on your site's value.

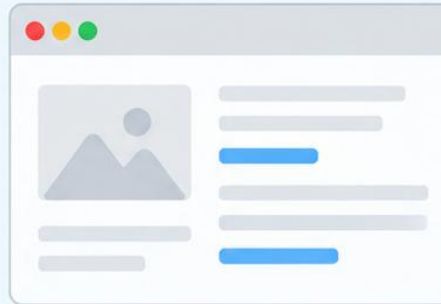

No Follow Attributes

Tell search engines not to follow certain links.

1

Links can help SEO

Quality links can improve your rankings and drive more traffic.

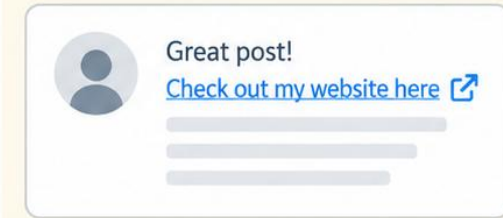

Higher visibility
in search results

2

Avoid unhelpful links

Some links added by users can be spammy or not relevant.

Unhelpful or
spammy links

3

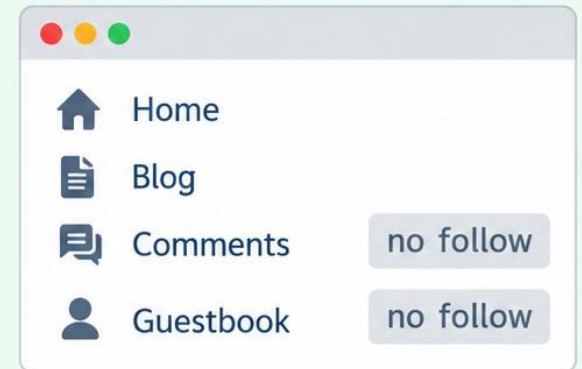

Use rel="no follow"

Add the no follow attribute to tell search engine crawlers not to follow the link.

```
<a href="https://example.com"
  rel="no follow"
>Link</a>
```

Search engines will not follow this link.

Structured Data

- A special set of code to help search engines identify common types of info.
- For example, websites that provide recipes can include structured data in their site design.
- This might include special code for the ingredients, cooking time, temperature, and nutritional values.
- By providing this structured data, search engines can easily categorize the information and display it directly on the SERP.

Structured Data

A special set of code that helps search engines understand your content and display rich results.

1

What is Structured Data?

A special set of code (using a standard format like Schema.org) to help search engines identify common types of information on your website.

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Recipe",
  "name": "Classic Pancakes",
  "cookTime": "PT20M",
  "recipeIngredient": [
    "2 cups flour",
    "1 cup milk",
    "2 eggs"
  ]
}
</script>
```

Helps search engines understand your content

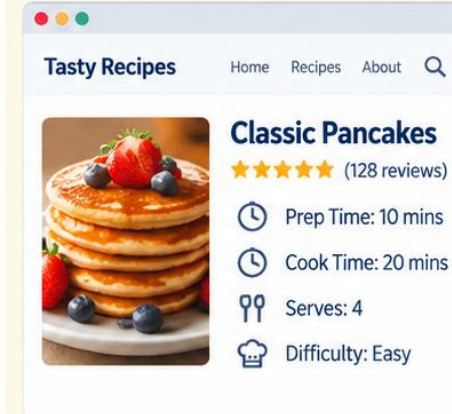

Provides clear, structured information

Can improve visibility and display rich results on the SERP

2

Example: Recipe Website

Websites that provide recipes can include structured data in their site design.

Structured data can include:

- ✓ Ingredients
- ✓ Cooking time
- ✓ Temperature
- ✓ Nutritional values
- ✓ Serving size
- ✓ Reviews and ratings
- ✓ And more...

3

How it appears on Google (SERP)

Search engines can easily categorize the information and display it directly on the search results page.

Benefits

- More visibility**
Can appear as rich results on the SERP.
- Better user experience**
Shows key information directly in search results.
- Higher click-through rates**
More attractive and informative listings can drive more traffic to your site.

Structured Data

- For example, when searching for recipes, structured data is pulled into SERPs as image and “Recipe” items:

The screenshot shows a Google search for "vegetarian recipes". The search bar at the top contains the text "vegetarian recipes" with a clear button (X) and icons for voice search, image search, and a magnifying glass. Below the search bar, the first result is from BBC Good Food, titled "115 Vegetarian recipes". It includes a small image of a bowl of soup and a description: "Meat-free recipes for entertaining and more. From veggie chillis and pies, to salads and stews, vegetables are the centre of these ...". Below the description are links: "Easy vegetarian", "Vegetarian recipes", "Low-calorie vegetarian recipes", and "Flamiche". The second result is also from BBC Good Food, titled "130 Vegetarian Dinner Recipes". It includes a small image of a plate of food and a description: "Discover more delicious vegetarian meals with our vegetarian traybake recipes, vegetarian party recipes and vegetarian pie recipes." Below the description are links: "Vegetarian recipes", "Vegetarian traybake recipes", and "Vegetarian dinner party recipes". Below these two results is a section titled "Recipes" with three recipe cards. Each card has a small image of the dish, a title, the source, the number of reviews, and the main ingredient. The first card is "Vegetarian recipes" from BBC Good Food, with "No reviews" and "Brussel sprouts". The second card is "49 quick vegetarian recipes" from Olive Magazine, with "No reviews" and "Paneer". The third card is "Vegetarian dinner recipes" from BBC Good Food, with "No reviews" and "Sweet potato". At the bottom of the "Recipes" section is a "Show more" button with a downward arrow.

Add Structured Data with WIX

Add Manual Structured Data to a Single Page

1. Open your Wix Editor.
2. Click **Pages & Menu** on the left panel.
3. Click the **More Actions** icon (three dots) next to your chosen page.
4. Select **SEO basics** and go to the **Advanced SEO** tab.
5. Click **Structured Data Markup**, then select **+ Add New Markup**.
6. Paste your custom JSON-LD code into the text box and click **Apply**. 

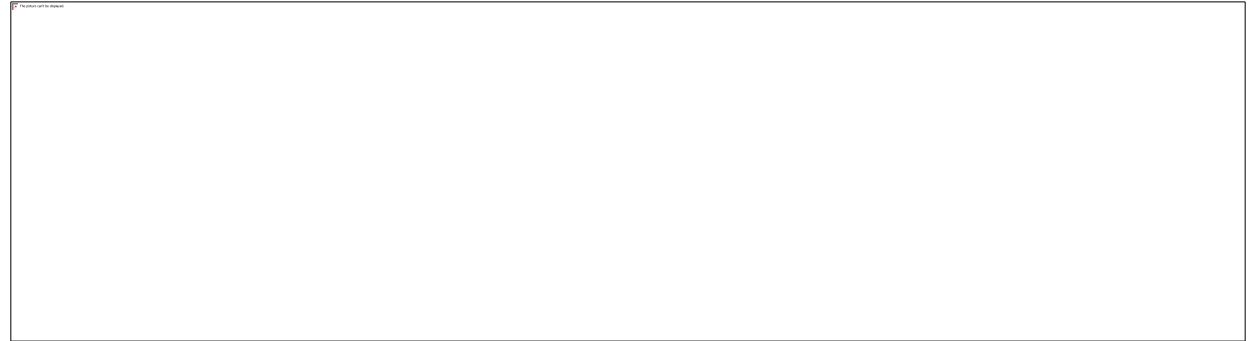

Customize Default Structured Data by Page Type

1. Go to your [Wix Dashboard](#).
2. Navigate to **Website & SEO > SEO > SEO Settings**.
3. Select a page type (like Blog Posts or Products) and click **Customize defaults** to modify or convert presets to custom JSON-LD code. 

If you share what **type of page** or **schema type** (e.g., Local Business, Product, FAQ) you want to add, I can help you write the correct JSON-LD code.

Structured Data – Rich Snippets

- Using structured data, search engines like Google offer a wide range of rich snippets that can enhance the look of a website listing on a SERP:
 - Product Rich Snippets
 - Recipe Rich Snippets
 - Event Rich Snippets
 - Review Rich Snippets
 - People Rich Snippets
 - Software Application Rich Snippets
 - Video Rich Snippets
 - Local Business Rich Snippets

Structured Data – WIX Editor

The screenshot shows the Wix Editor interface for the website www.partytrayparadise.ca. The left sidebar, titled "Site Pages and Menu", contains a "Site Menu" section with a list of pages: Home, Welcome, About, Review, Contact, Blog, Richmond Restaurants, Vancouver Restaurants, Group Lunch Box Delivery, and Pizza Catering. The "Page Settings (Home)" panel is open on the right, showing tabs for Access, SEO basics, Advanced SEO, and Social share. The "Structured data markup" section is active, displaying a list of markup types: Site name, Sitelinks search box, Restaurant (with a warning icon), Business Information, FAQ, and Connect with Us. A "+ Add New Markup" button is at the bottom of the list.

The "Edit markup" dialog box is open, showing a text area for writing JSON-LD markup. The text area contains the following code:

```
<script type="application/ld+json">
{
  "@context": "https://schema.org",
  "@type": "Corporation",
  "name": "Party Tray Paradise",
  "url": "https://www.partytrayparadise.ca/",
  "logo":
    "https://static.wixstatic.com/media/a2979f_76d5779
    4211f404293486fea3359bc78~mv2.jpg/v1/fill/w_338
    ...
}
```

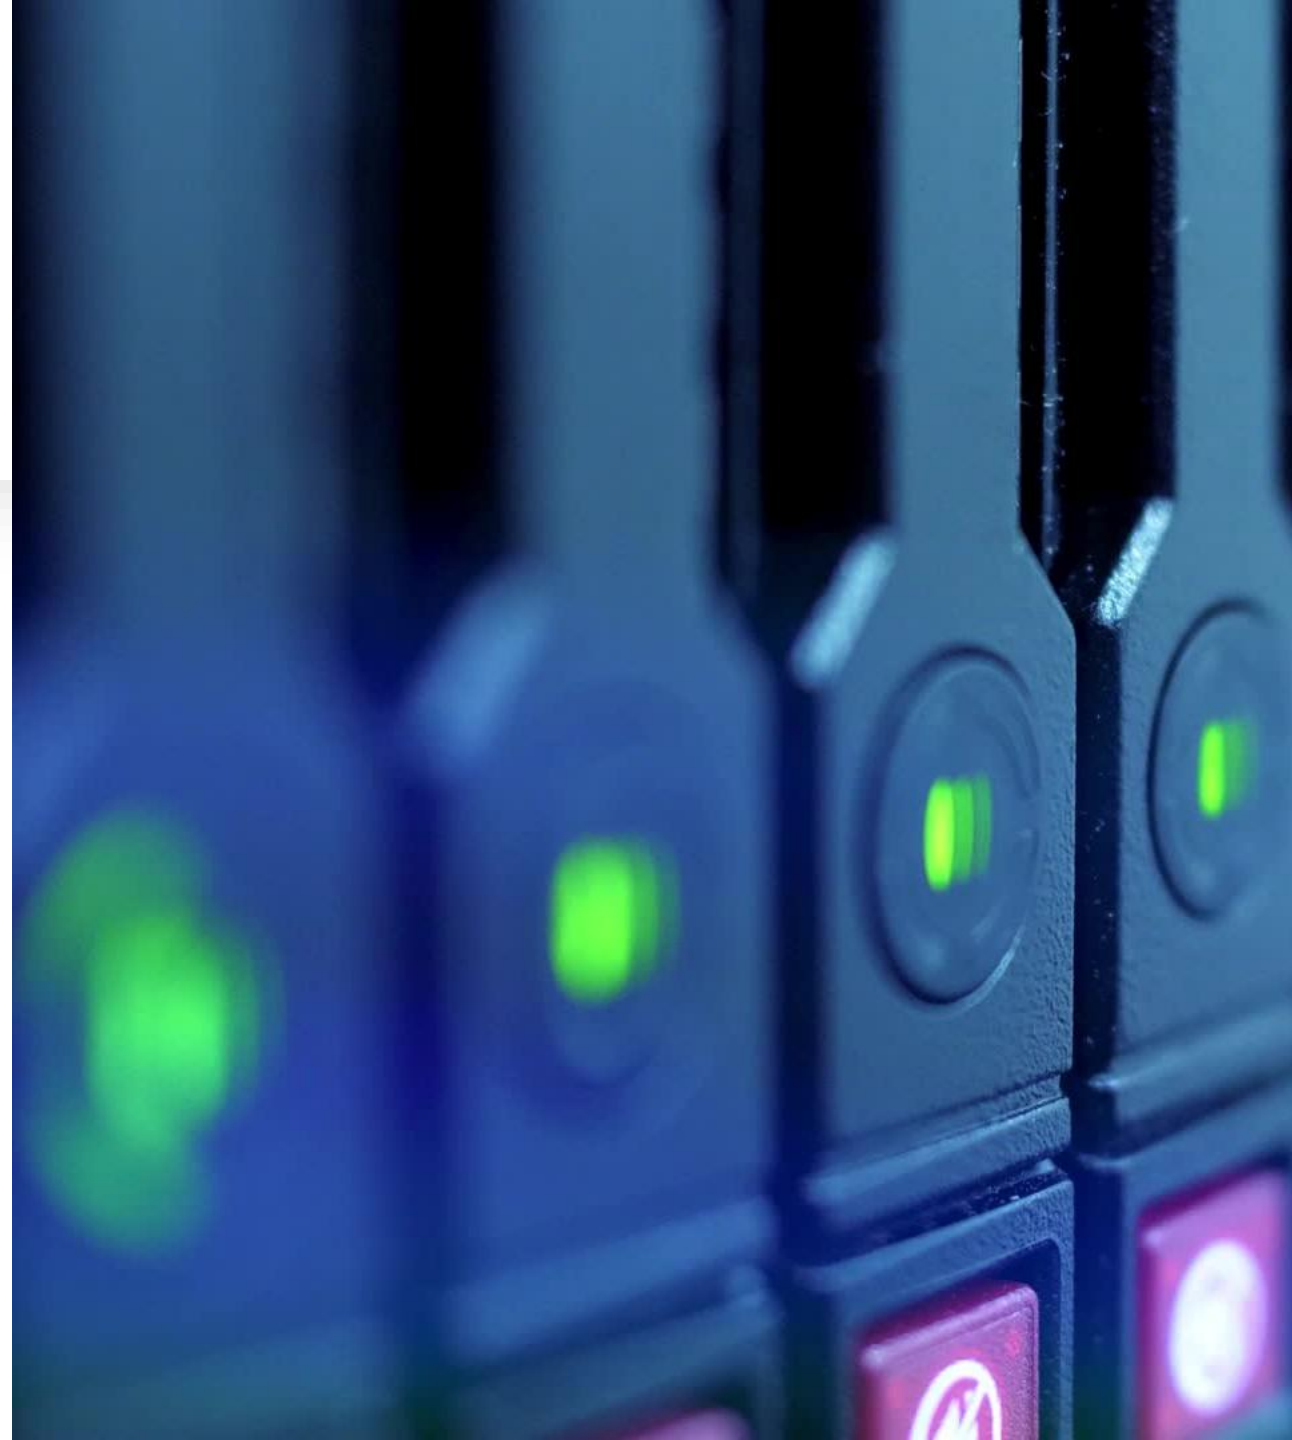

At the bottom of the dialog, there are "Cancel" and "Apply" buttons.

Activity: Rich Snippet Hunt

- Using Google, seek out at least three examples of rich snippets on SERPs.
- Take note of what kind of query results in SERPs with rich snippets and consider the relevance of the information included in the snippet to the query.
- Finally, consider the advantages that rich snippets offer over regular SERP listings

Build It Zone: No Follow and Structured Data

- Log in to Google Search Console and look at the robot.txt Tester tool.
- Does the class site need robot.txt files or no-follow attributes?
- Look at the Structured Data Markup Helper and other resources to implement structured data.
- Decide where structured data can help the class site and tag the site appropriately to implement it.

Binder Builder Activity

- Research and make a list of the different structured data guides and tools available for the major search engines.
- Note any distinguishing characteristics of each guide or tool and list their URLs for future reference.
- Add the Structured Data Guides and Tools list to your SEO Professional's Binder.

Geographic Targeting

Geographic Targeting

- Optimizing sites to attract local customers can be an effective, and at times cost-effective way to boost conversions and sales.
- People want to find things regionally and in their neighborhood.
- Geo-targeting is growing in importance as technology improves.
- A company should register with Google Business Profile: provide local, hours, and special announcements which can become part of the SERP.

Geographic Targeting

- There are many other business listing sites, such as:
 - Yelp
 - Government directories
 - Bing Places for Business
- Business listing info must be 100% accurate and consistent across all listings and directories.
- Differing listing info can hurt webpage rank because search engines reward accuracy and consistency.

Pay-per-Click (PPC) Advertising

- One of the most common ways that companies maintain and expand their site visitors.
- When setting up a PPC campaign, target locations can be set from very wide to very narrow locations – or locations can even be excluded.

Geographic Targeting

- Geo-targeting and international customers - SEO pros should optimize sites for those customers:
 - Provide a region-specific TLD
 - Have geographically-specific landing pages
 - Offer the site in the local language
 - List prices in the local currency
- *Have you ever visited the homepage of an international organization and been asked to select your country and language?* You were being directed to geo-targeted pages.

Activity: Google Business Profile Audit

Use Google Maps to find the profile of a local business. Examine the business's profile and write a short audit. Your audit should answer the following questions:

1. Does the business list its website and address on their profile?
2. Does the business include their updated hours of operation?
3. Does the business have any recent reviews?
4. Does the business provide any buttons or links that make it easier to connect with them through their profile (such as a “place order” or “make reservation” button)?

Activity: On-Page SEO Checklist

- Based on what you have learned so far, make a detailed list of features that can be optimized.
- How would you evaluate each feature on a site?
- Keep in mind that not all features may be necessary depending on the site owner and their target customers.

Build It Zone – Geographical Targeting

- How does geo-targeting apply to the class site?
- Discuss the relevance of:
 - Adding locations to keywords
 - Google My Business and other business directories
 - PPC ads for specific regions
 - Region-specific TLDs
 - Additional languages and currencies
 - Geographically-specific landing pages
- Make changes to the site based on the discussion.

Binder Builder Activity

- Create an On-page Website Optimization checklist based on the ideas covered in this chapter.
- You may want to create sections, including URLs, site architecture, page architecture, search engine-friendly design, and geographical targeting.
- This is the first draft of the On-page Website Optimization checklist because it will expand as you continue in this course.
- Add the current version of the On-page Website Optimization checklist to your SEO Professional Binder.

Chapter Review

Share your On-page Website Optimization checklist with your classmates.

Give each other feedback and discuss in what order you would do the items on the checklist.
